## Intellicus – Next Generation Reporting and Business Insights

### Data Sources

Oracle, MSSQL,  
MySQL, DB2,  
Postgres, XML

Intellicus is a BI reporting tool that offers a platform for comprehensive analysis and intelligent decision-making, through its simple-yet-powerful features. Intellicus has been continuously evolving and enhancing BI features over the years, delivering scalable and robust solutions to thousands of satisfied users worldwide.

### Ad hoc Reporting

Intellicus provides an intuitive interactive interface for business users to create or modify their reports. It works over a meta layer constructed and controlled by the data administrator. Adhoc Reporting comes with a self-help wizard interface and an on-report drag-drop-and-drill interface – the Power Viewer.

### Multiple Output Formats

PDF, HTML, MS- Excel,  
RTF, MS-Power Point,  
CSV, High Speed CSV,  
XML

### Executive Dashboards

You can create dashboards of various business metrics and parameters to constantly track business performance. Decision makers and executives can subscribe to readymade dashboards or tailor their own using widgets. Dashboard widgets have live and interactive content that can dynamically change based on time and context.

### Next generation OLAP

Intellicus enables you to extend the OLAP analysis of your business data. It connects you to OLAP servers and pulls the analysis into the reporting. Besides rich and interactive slicing and dicing of data, users can save their drill status and revisit exact points of interest for data updates.

### Advanced Visualization

Reporting controls to get real insights into data – animating and zoom-able charts, and drillable data- trees that could embed into your web pages. The path-breaking pluggable interface for data visualization components makes Intellicus future-compatible, where you can easily choose and plug user interface controls (charting, grids and trees) of your choice.

### Reporting as a Service

You can have an on-demand reporting services platform behind your SaaS hosted application accessed by multiple customers, who can access reporting elements in their desired themes, locale preferences, languages, and time zones.

### Canned Reporting

Intellicus creates a powerful development foundation to easily build desktop or web-based reporting. It makes it easy for your developers to create complex and interactive reports with minimal coding and in very less time. Designers need not install any database client tools or drivers on their local machine, they can use the browser-based Web Studio to design and develop reports.

### Platform

Linux, Windows,  
Solaris, HP-UX, AIX,  
FreeBSD (with 64bit  
editions)

### Flexible Licensing

Intellicus offers innovative and flexible licensing, based on concurrent requests, functionality and components. You can add them incrementally as your need grows!

## Advanced Security Framework

Intellicus provides Single Sign-on enabled login integration with your application irrespective of the technology, platform or framework. SQL Injection Prevention, Data Masking, User-activity Auditing and Event Capturing, Granular Access Rights with full support to SSL deployment – all these make Intellicus the best choice in reporting for a variety of security, auditing and fraud prevention software products. Customer or user level data restrictions, and report approval process, helps you build compliance systems for financial, healthcare, and auditing domains.

## High Performance & Clustered Deployment

Intellicus is a lean and light-weight system with a simple deployment structure that efficiently generates hundreds of thousands of pages every day for your continuous business operations need. It scales to further larger performance and availability needs through its 64-bit edition and capability to cluster across boxes.

## Report Management

Intellicus provides a complete spectrum of report managing tools and frameworks for development, distribution, deployment and maintenance. Extensive APIs help you integrate these readymade report management modules and functionalities into your application and you don't have to build report management software around it.

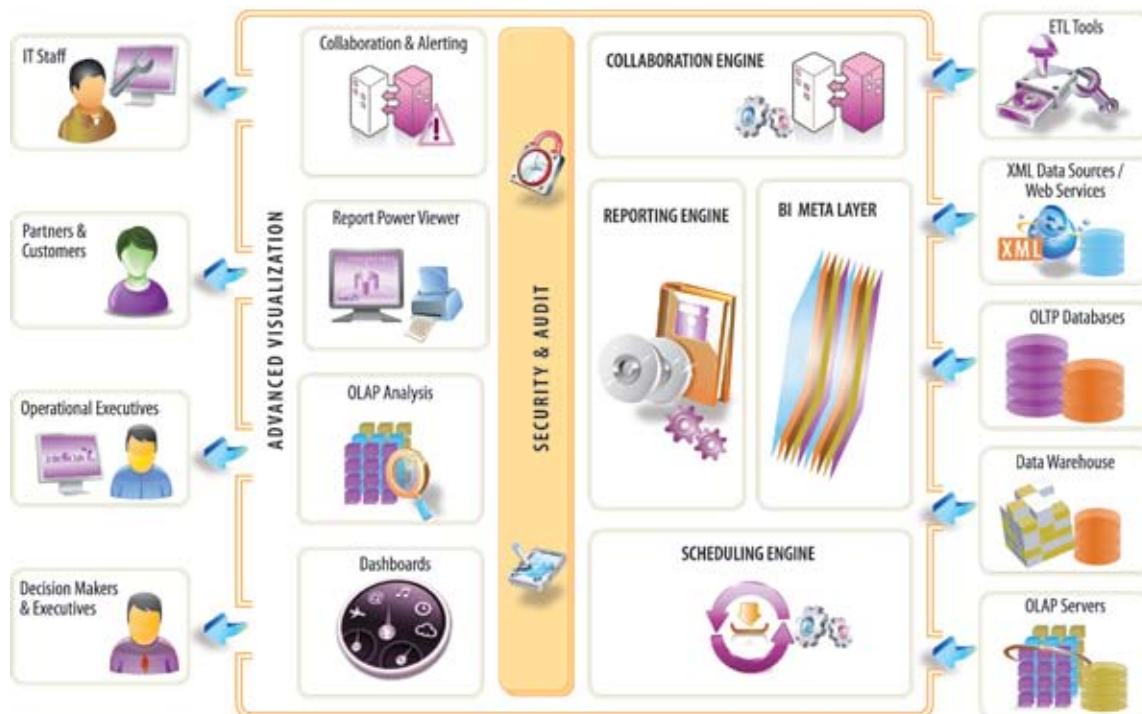

## OEM Ready

Intellicus can be white labeled for your product or organization. You can wrap all or selected components to give a unified reporting experience to your users. This coupling is achievable, irrespective of whether your application is written in Java, DotNet or PHP.

*Check with us to know how you can ship Intellicus built within your product!*

## Scheduled & Batch Reporting

Intellicus enables scheduled data processing and generation of reports during off-peak hours; bulk parameterized generation for huge number of users and delivery over email, FTP, or shared folders.

## Professional Consulting Services

With hundreds of implementations worldwide, Intellicus Professional Services Consultants have gained in-depth experience in multiple domains with each unique-in-itself implementation.

You can leverage their experience to achieve precise and timely end-to-end roll outs. Our consultants help you in strategy development, full implementations and enhancements.

*Check with us for expert architectural assistance and integration services!*

## Support

Intellicus support operations are backed by experienced and motivated engineers, committed to resolve your issues, promptly and completely. They work corresponding to your time zones to ensure your application runs trouble-free and successfully. Intellicus offers a set of self-help support tools including support portal that are crafted out of our years of experience and knowledge.

Beyond support, we are consistently working towards proactively fixing bugs and bringing continuous enhancements, ensuring that your application faces no major production issues.

## About Intellicus

Intellicus is one of the leading providers of next generation Web-based business intelligence and reporting solutions. Incorporated in 2001, Intellicus has grown globally with successful implementations across America, Europe and Asia.

With over 5000 global installations, Intellicus has major presence in leading verticals including Healthcare, Compliance, Supply Chain, Financial Services and Digital Media.

Fortune 500 corporations have chosen Intellicus over other larger vendors for enterprise deployments due to its lean implementation cycles and near-zero maintenance costs.

Intellicus' flexible architecture and a solid integration framework has also won major OEM relationships with leading ISVs.
