### **Deploying Intellicus in SunOne App. Server**

This document provides steps to deploy Intellicus portal on SunOne application server 9.1 on Windows OS.

#### **Prerequisites**

It is assumed that:

- Intellicus Report Server is installed up and running.
- SunOne application server 9.1 is installed.

#### **Deployment process**

#### Step 1. Start the server

To start the server from Start menu, click Start > Programs > Sun Microsystems > Application Server PE 9 > Start Default Server .

Figure 1

#### Step 2. Getting the Admin console

After the server is up and running, open the Admin console. To get Admin Console, click

# Start > Programs > Sun Microsystems > Application Server PE 9 > Admin Console.

It will open Server Application Login screen in a new browser window.

Specify user name and password. This should be the one that was specified on the **Admin Configuration** screen during Installation process.

Click Login button.

Common Tasks page appears.

intellicus.war is located in IntellicusAPIs folder. Click **Browse** to select intellicus.war file located in this folder.

For example, if Intellicus is installed in C:\Program Files, then path of war file will be C:\Program Files\Intellicus\APIs\intellicus.war.

Click **OK** after selecting the path.

Web Applications page appears.

Click Launch link under Action to launch the Intellicus web Portal.

Specify following URL in address-bar of a browser as per following syntax to access the application.

http://MachineIP:Port/intellicus .

- **MachineIP:** IP of your machine where Intellicus portal is deployed on SunOne is running.
- **Port:** Port for SunOne Application Server. Port number 8080 is default for oracle application server.
