

Embedded Business Intelligence

Single Sign-On

Seamless Integration

White Labelling

intellicus

Intellicus gives the power of comprehensive Business Intelligence to your application, enabling your users to visually analyze your application data. Enable your customers to make data-driven decisions and get an edge over your competitors with self-serve BI capabilities.

Single Sign-On

Intellicus provides a secured reporting workspace to each user of your application. With a highly secured SSO integration system, navigate seamlessly between your application and the reporting screens with appropriate authorizations & authentications.

Integrate Seamlessly on the Web

Ranging from attractive dashboards to reports, you can embed incredible visualizations by inducing analytical capabilities to your solution. Intellicus provides seamless screen embedding as well as data integration with application by an extensive range of data and controller APIs.

RESTful Web Services

Intellicus exposes native and REST APIs that a developer can use and make his application communicate with Intellicus and make use of all the Intellicus functions embedded in any custom web page or application.

White Label

You can brand Intellicus BI with your name, logo and aesthetics. You can release your branded BI system to your customers powered by Intellicus.

Embedded Mobile App

Access your business-critical data on your mobile device via your mobile application. Intellicus mobile SDK embeds all the mobile BI features into your mobile application. Creating a new mobile application or releasing a customized version on the App store is a matter of few hours of work using Intellicus mobile SDK.

Packaging & Deployment

Intellicus' industry-leading installation integration, and reporting objects' packaging and deployment mechanism help you develop and distribute reports and dashboards with extraordinary ease.

Personalized localization

Intellicus comes in more than 30 international languages. Different users from the same multi-tenant instance can personalize localization based on their preference.
